1 Overview

This document details available information, data sources, and visualisations that will provide relevant data insights to gain a deeper understanding of current validator economics and any intuitions or assumptions used in formulating proposed solutions to capping the number of validators. The information gathering is targeted towards the proposal being evaluated, viz. a variable minimum validator balance.

As the project progresses and additional data requirements are identified, this document will be updated accordingly.

Many people have generously contributed time and data, and made helpful suggestions, which has been incredibly helpful in compiling the resources listed in this document. They include, but are not limited to Barnabé Monnot and the RIG team, Justin Drake and Alex, Ben Edgington, Paul Harris and Josh Fernandez.
